

Estia Air-to-Water Heat Pumps

Estia - Toshiba's advanced air-to-water heat pump solution - uses patented innovative technologies that take advantage of renewable energy of its surroundings to heat water for usage as residential space heating and as a hot water supply. Estia is suited for both new homes as well as renovations. Estia replaces or complements traditional boilers used for heated floors, space heating radiators as well as hot water supply for domestic use. An advanced heating and cooling system of the future, Estia reduces running costs while contributing to reduction of CO₂ emissions by using renewable energy.

FEATURES

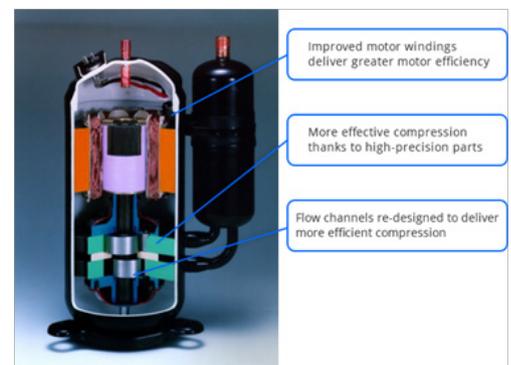

World-leading energy efficiency - COP of 4.88 (for 11 kW model)

With its best-in-class COP performance, the Estia air-to-water heat pump system delivers more heating power with less energy consumption. Estia uses high-quality components and material which contribute to the overall saving in energy consumption.

With the Toshiba advanced inverter, Estia air-to-water heat pump system only delivers the heating capacity required, thus consuming only the necessary electricity.

Toshiba advanced technology

Toshiba inverter uses the new, vector-controlled, Intelligent Power Drive Unit, which enables a wider range of frequencies and voltages. The Toshiba DC twin-rotary compressor has a large capacity range operation, with an effective system of power limitation, which reduces the power consumption. Performance is further improved by the high-speed converter circuit which calculates and optimises the power supply to the compressor.

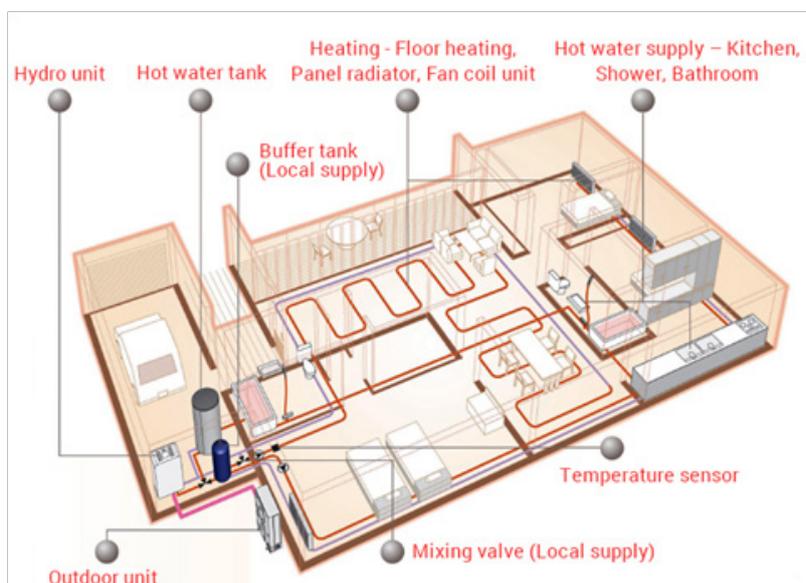

Environmentally conscious

The use of Toshiba's Estia heat pump contributes to the reduction of global CO₂ emissions in the atmosphere and limits the use of fossil fuels or other non-renewable energy primary sources. Whenever required for maintenance purposes, the entire R410A refrigerant (non-ozone depleting) can be completely sucked back to the outdoor unit through the powerful embedded Toshiba "pump down" operation.

One system, multiple solutions

Estia heat pump system can be used in combination with different types of emitters: existing heating low temperature radiators, floor heating or fan coil units.

Standard Type

Outdoor unit

Toshiba has long-term experience of successes in air-to-air heat pump production. The same reliable and award-winning technology is at the core of the new air-to-water heat pumps, above all the advanced inverter technology and the DC twin-rotary compressor. Estia heat pumps operate with the reliable and safe R410A refrigerant.

Hydro unit

The high-efficiency plate heat exchanger receives the optimum quantity of refrigerant to produce hot water at low or medium temperature (20-55°C) or cold water (10-20°C). A back-up heater (3, 6 or 9 kW options) further supports the operation for extreme conditions. The hydro unit integrates the advanced control of water temperature to allow an optimised distribution to emitters and to the domestic hot water tank.

Hot water tank

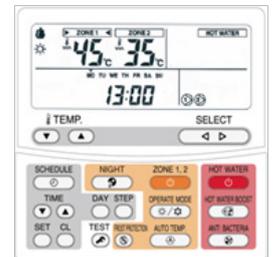

The Estia tank is a compact stainless steel insulated tank producing domestic hot water for sanitary use. The performance of the overall system is also maximised thanks to the integrated coaxial heat exchanger which uses hot water produced by the heat pump (whenever energy-efficient and possible). With the optimised control logic, whenever additional hot water is needed, an internal electric heater is activated. This solution reduces running cost and guarantees a constant level hot water temperature.

Three storage capacities (150, 210 or 300 litres) meet any household requirements.

Controller with weekly timer

This controls the distribution of hot water for up to 2 zones and to the hot water tank. The built-in software logic collects the signals from the sensors, regulates the water temperature and optimises the system's energy consumption. In addition, the anti-bacteria control routinely increases the temperature in the hot water tank. The easy-to-use remote control is conveniently attached to the hydro unit. With its large and detailed display it is possible to visualise and set all the major operating parameters and also program the weekly timer.

Powerful Type (8 kW-11 kW)

For cold climate areas and higher water temperature needs

- Leaving water temperature 60°C is achievable down to -5°C*
- Expanded operation outdoor temperature down to -25°C**
- Maintain the rated capacity down to -15°C

* The water temperature might not reach to 60°C depending on the contribution such as the low water flow.

** As it is possible that the system does not start at -25°C ambient, the main power supply should be turned on prior to start of operation.

Accessories

HWS-AMS54E	Remote Controller Built-In Timer	Full control including service functions with fully-programmable 7-day timer
TCB-PCMO3E	Input Signal PC Board	Estia room thermostat, emergency stop input signal
TCB-PCIN3E	Output PCB	Interface provides an output for fault and run

Note: The electric heater, incorporated in the hot water cylinder, requires separate supply to hydro unit.

- ¹ Heating performance measurement conditions: outside air temperature 7°C, water supply temperature 30°C, outlet temperature 35°C, refrigerant piping length 7.5 m (no height difference).
² The outdoor unit operating noise is measured at the point of 1 m away from the unit back surface centre and 1 m high from the ground. The hydro unit operating noise is measured at the point of 1 m away from the unit front surface centre. The value of the operating noise varies depending on room structure where the unit is installed.
³ The remote controller is shipped with the hydro unit. Use two 1.5 m wires to connect the hydro unit with the remote controller.
⁴ Check the water piping for leakage under the maximum operating pressure.
⁵ Do not leave the hydro unit at 5°C or below.

	Hot Water Cylinder Heater Power Supply	V/ph/Hz	220-240/1/50	220-240/1/50	220-240/1/50	220-240/1/50	220-240/1/50	220-240/1/50	
	Hot Water Cylinder Heater Maximum Current	A	12.0	12.0	12.0	12.0	12.0	12.0	
	Remote Controller Standard Model ³		HWS-AMS54E	HWS-AMS54E	HWS-AMS54E	HWS-AMS54E	HWS-AMS54E	HWS-AMS54E	

Note: System retail price excludes domestic hot water tank.

Accessories

HWS-AMS54E	Remote Controller Built-In Timer	Full control including service functions with fully-programmable 7-day timer
TCB-PCMO3E	Input Signal PC Board	Estia room thermostat, emergency stop input signal
TCB-PCIN3E	Output PCB	Interface provides an output for fault and run

Note: The electric heater, incorporated in the hot water cylinder, requires separate supply to hydro unit.

¹ Heating performance measurement conditions: outside air temperature 7°C, water supply temperature 30°C, outlet temperature 35°C, refrigerant piping length 7.5 m (no height difference).

² The outdoor unit operating noise is measured at the point of 1 m away from the unit back surface centre and 1 m high from the ground. The hydro unit operating noise is measured at the point of 1 m away from the unit front surface centre. The value of the operating noise varies depending on room structure where the unit is installed.

³ The remote controller is shipped with the hydro unit. Use two 1.5 m wires to connect the hydro unit with the remote controller.

⁴ Check the water piping for leakage under the maximum operating pressure.

⁵ Do not leave the hydro unit at 5°C or below.

Estia Air-to-Water Heat Pump Monobloc
