

# RAS Multi-Split Range

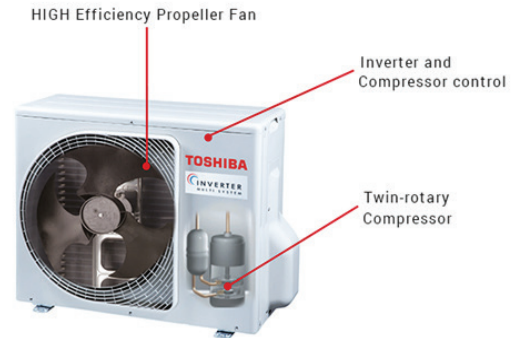

## Multi-Split Inverter

Toshiba's Multi-Split system allows air conditioning operation to up to five units from a single outdoor unit, making it an exceptionally flexible solution for large spaces. Its small footprint and flexible piping enables installation of the outdoor unit virtually anywhere and out of sight. Each indoor unit can be individually controlled for even more efficiency and comfort where and when it is needed.

### FEATURES

#### High energy savings

Toshiba high-quality multi-split systems contribute to drastically reducing operating costs and increasing energy efficiency. The multi-split outdoor unit achieves efficiency in partial load conditions where the Toshiba inverters deliver their best performance. Toshiba's new super-efficient DC twin-rotary compressor enables top-class performance at low energy consumption. With this efficient unit, operating costs decrease dramatically, compared to other multi-split systems.

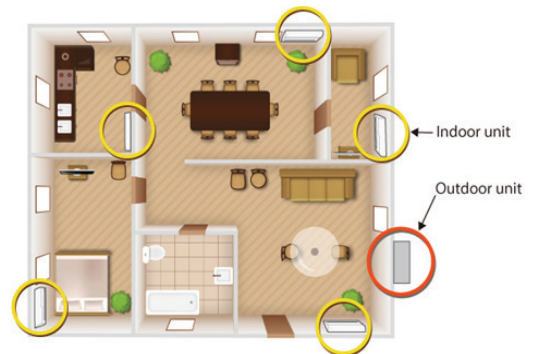

#### Comfort

Toshiba Inverter multi systems feature higher standards of indoor air quality, sound levels and environmental awareness. Special attention has been dedicated to night-time comfort, with the improvement of the silent operation mode, available in indoor units.

#### Flexibility

One outdoor unit can serve up to five indoor units for exceptional flexibility and reliability.

Toshiba Inverter multi system outdoor units are lightweight and compact. Just one outdoor unit takes up little space on a wall or in a yard. It keeps the exterior of buildings neat with quieter operation.

Choose from four types of indoor units, high-wall, ducted, compact 4-way cassette and console type to suit any design.
